USSN 10/808,328 Our ref: 07250029aa Page 2

LISTING OF THE CLAIMS:

1	1. (Currently Amended) A method of preparing a hard copy by forming a transparent coating
2	layer on a recording medium in areas where image has been recorded, comprising the steps of
3	causing clear droplets to fly from a recording head toward said areas where image has
4	been recorded;

curing said droplets while they are in flight; and

depositing said cured droplets in said image-recorded areas of said recording medium so as to form said coating layer;

wherein a hard copy is prepared.

- (Original) The method according to claim 1, wherein a curing intensity of said curing step that is to be performed on said droplets is adjusted in accordance with the image as recorded on said
- 3 recording medium.

- 3. (Original) The method according to claim 2, wherein an adjustment of the intensity of said
- 2 curing step that is to be performed on said droplets is for changing viscosity of said droplets as
- 3 they are deposited on said recording medium.
 - 4. (Original) The method according to claim 3, wherein the surface roughness of said coating
- 2 layer that is formed of said droplets as they have been deposited and hardened is adjusted by
- 3 changing the viscosity of said droplets as they are deposited on said recording medium.

1	5. (Currently Amended) A The method according to claim 3, of preparing a hard copy by forming
2	a transparent coating layer on a recording medium in areas where image has been recorded,
3	comprising the steps of:
4	causing clear droplets to fly from a recording head toward said areas where image has
5	been recorded;
6	curing said droplets while they are in flight; and
7	depositing said cured droplets in said image-recorded areas of said recording medium so
8	as to form said coating layer;
9	wherein a curing intensity of said curing step that is to be performed on said droplets is
10	adjusted in accordance with the image as recorded on said recording medium and an adjustment
11	of the intensity of said curing step that is to be performed on said droplets is for changing
12	viscosity of said droplets as they are deposited on said recording medium; and
13	wherein the intensity is adjusted for changing the viscosity lower as an image area to be
14	coated by the cured droplets has a higher recording density.
1	6. (Original) The method according to claim 1, wherein said droplets contain a thermosetting
2	resin material and said curing step comprises applying infrared radiation to said droplets while
3	they are in flight.
1	7. (New) The method according to claim 1, wherein the prepared hard copy accurately
2	reproduces gloss.
1	8. (New) The method according to claim 1, wherein the prepared hard copy presents desired
2	surface properties even if there is unevenness in recording density.
	recording density.

(New) method according to claim 1, wherein the prepared hard copy is textured and looks real.
